

Interactive Digital Art and Design SE608

Project Proposal Year IV

Student Name:	Jeffrey Owusu	Student Number:	C00314408
Working Title:	I'll do it later / Jeffo games production		
Description:	Do It Later is an open world task management game based on procrastination and everyday tasks. The player explores a small interactive world containing locations such as their home, school and local shops. Throughout the game, the player receives everyday tasks including completing and submitting school assignments, cleaning their home, shopping for groceries and attending college. Tasks have deadlines and compete with distractions such as games, television, social activities and other optional activities. The player must manage their time, motivation and stress while deciding which tasks to prioritise. The project will contain game design, interaction design, animation, user interface design and programming while presenting procrastination through an interactive and humorous gameplay experience.		
Reasons for selecting project:	The reason I chose to do this project is because I want to put my skills to the test. In the IDAD course, I've learned how to code games and websites, as well as different forms of art like graphic design and animation. I wanted to choose a project that would let me use the different skills I've learned throughout the course. I feel like this project will challenge me, help me improve my skills, and allow me to show what I've learned. And hopefully this game will encourage people to not procrastinate and to be on track with their tasks		
Proposed research content:	Inspiration from Open world games - House flipper - The sims
